

# SELF ASSESSMENT TOOLS FOR PROSPECTIVE NEWCOMERS

## Project Synopsis

Time: 6-12 months

Complexity: Medium

Cost: \$25,000 - \$100,000

This project creates a self-assessment tool that directs internationally-trained workers (ITWs) to the next step in their certification process.

### PROJECT DESCRIPTION

The pathway to certification varies among ITW applicants. To improve the efficiency of the certification process for both ITWs and regulators, this project designs an online self-assessment tool that directs an ITW to the next step in their certification process. This tool dispenses accurate advice to ITWs seeking licensure in Canada, and allows them to pursue certification without the help or intervention of the regulator itself.

### KEY OUTCOMES

- Regulators do not have to respond to individual queries about the certification process.
- The certification process is made more efficient and easier for ITW applicants seeking licensure.

### KEY CONSIDERATIONS

- Build a pre-assessment and application tool that may guide the applicant through the process:
  - Automatically populates forms
  - Sends and receives third party notifications
  - Advises the applicant of specific registration policies and procedures that directly affect their particular situation.

### PROJECT COMPONENT

- Design and develop a web portal interface that facilitates a streamlined, user-friendly, and self-service credentials recognition process.
