

REVIEWING EDUCATIONAL TOOLS AVAILABLE FOR APPLICANTS

Project Synopsis

Time: 6-12 months

Complexity: Medium

Cost: \$25,000 - \$100,000

This project reviews and updates available online educational materials and determines whether these materials still meet the needs of both the regulator and applicants.

PROJECT DESCRIPTION

As regulators change their certification requirements, occasionally educational materials need to be updated to reflect these changes. This project reviews existing online educational materials to ensure that these materials still meet the educational requirements for those applying to become certified in a regulated occupation.

KEY OUTCOMES

- Internationally-trained workers and other applicants are well prepared to begin training for their certification.
- Applicants become certified faster as their education has better prepared them for their subsequent training.

KEY CONSIDERATIONS

- Review academic upgrading courses to ensure recommended courses are appropriate and meet the necessary competencies required for the regulated profession.
- Develop educational tools that do not contain unnecessary barriers that would impede the success of an internationally-trained applicant (e.g. complex, overly technical language)

PROJECT COMPONENT

- Development of educational tool and supporting processes for assessing the knowledge, skills and abilities of applicants.
